Tools Required (not supplied)

Phillips cross-head screwdriver
Mallet
Tape Measure

Before You Start

- Layout all of the component parts and make sure you have all of the parts listed.
- When you are ready to start, make sure that you have the right tools to hand, plenty of space and a clean dry area for assembly. Always try to assemble the product as close as possible to the intended location.
- Remove all plastic bags and dispose of safely.
- Retain the instructions for future use.

Caution

This pack contains small items which should be kept away from children.

Assembly

Helpful hints:

You may find it easier to assemble your obelisk horizontally on its side and then carefully stand it upright to install.

If the screw holes on the poles are covered with a thin layer of the protective coating, carefully remove this by pushing a small nail through the coating.

1. Assemble the three sides as shown (A, B and C).
2. Fit the finial (E) with the retaining screw (G).
3. Attach the three rings (D) with the assembly screws (F).
4. Place assembled obelisk in desired location. If the ground is soft the obelisk can be pushed into the ground. Where the ground is particularly hard fitting can be aided by either watering the ground or pushing a suitable rod or spike in first. A depth of approximately 0.30m (1') is recommended.

All sizes approx.
