

# Wire compost bin

## Contents:

---

Side panels x 3

Side panel with door x 1

Lid x 1

## No Tools Required

## Before You Start

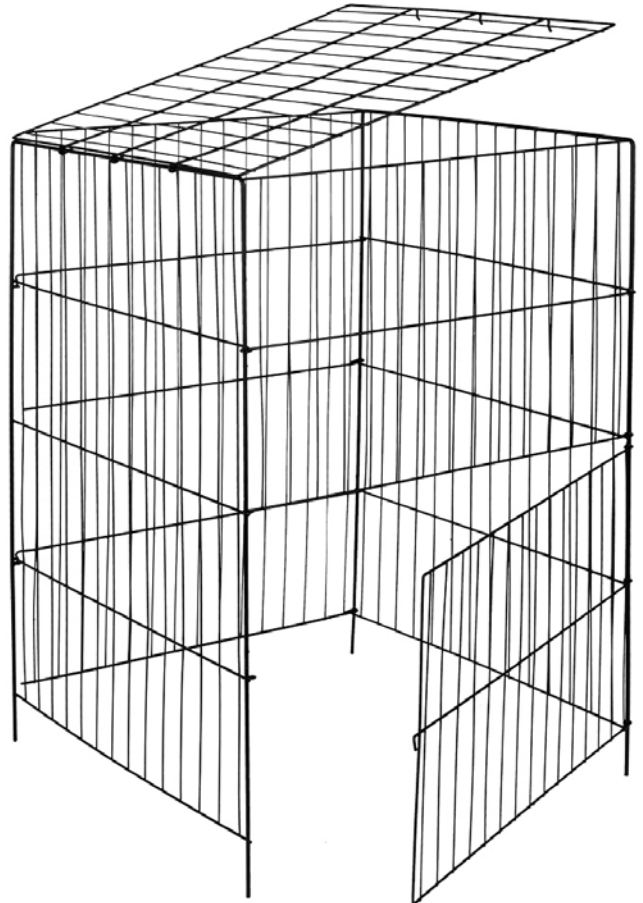

---

Please check the pack contents before attempting to construct this 'Wire compost bin'.

## Assembly

---

1. Ensure that the ground spikes are at the bottom, the joining rings are on the inside of the side sections and the door catches are on the outside.
2. Join the four side sections by lining up the hooks and rings and push home firmly.
3. Add the lid by inserting the two top spigots in the rings; bowing the lid slightly will ease the assembly.
4. Close the lid and ensure that all of the catches are in place before positioning the bin. This will ensure the bin is square and the lid operates effectively.
5. Once positioned, push the ground spikes firmly into the ground to stabilise the structure but avoid impeding the access door.
6. The access door can be used to remove well rotted compost without moving the bin.

**Note:** A liner is recommended as this will speed the composting progress. This can be done with a proprietary liner or simply lined with polythene, u.v. stabilised weed control fabric etc.

## Helpline Number

If you have any problems or queries with this product please call our helpline on +44 (0)1406 372227 between the hours of 9am to 5.30pm Monday to Friday.
