# SUPERIOR FEEDING STATION KIT FOR WILD BIRDS

## Contents

## Instructions

Accessories D, E and F should be fitted to the top pole (H) prior to assembling the remaining parts of the pole. The position of the accessories is flexible as they can be moved up and down the pole. Once chosen they are locked in place by the wing bolts (K).

The plastic moisture protection sleeves (N) should be slipped on the poles (I & J) prior to assembling the poles. The poles are held together with the small self tapping screws (M). Slip the moisture protection sleeve down to cover both the screw and the joint.

We recommend that at least 41cm (16") of the pole is below ground. The bird bath should be positioned on the pole so that food and other debris does not fall into the water and contaminate it.

Assemble the feeders by attaching the small base to the feed tubes. Bases and tops are attached to the feeder tubes with a twist - lock bayonet action. The clear plastic seed feeder tube should be attached to the base that has the fold down wire perches. The base without perches attaches to the wire mesh peanut feeder tube. The suet feeder requires no assembly.

Fill each feeder with an appropriate feed and attach the domed top piece.

## Care

We recommend that you clean all the Feeding Station accessories in a mild disinfectant solution once every two months or more often in warm weather. Remove as much old food and debris as possible. Wash in the solution and thoroughly rinse with clean water.

Periodically reposition your Feeding Station to a different area within the garden to avoid an accumulation of unhygienic deposits.

An extension kit is available from the Helpline desk. This will increase the height of the pole by 70cm (2'3"). Please quote part no: A01342ext.
