Gard EDGE™

1.16m x 0.15m

5 024160 090270 >

Step 1: Decide on the length and shape of the lawn edge you wish to create. A hosepipe can be used as a guide when creating new curved or shaped borders. Arrange the hosepipe in the desired location, place sand next to the hose to define the line for cutting, remove the hosepipe and cut lawn edge to the required shape.

Step 2: Dig a slit trench flush with the edge of the lawn to a depth of approximately 10cm (4"). Care should be taken to ensure all stones and debris have been removed as this may damage the Gard Edge when fitting.

Step 3: With the double ribbed side facing the lawn and the clips side facing the border, clip the edgings together and place into the trench. Position a block of wood on top of the edging and using a mallet carefully tap the edgings into the ground until the top of the edgings are flush with the lawn. Ensure the dugout section is backfilled and tamped down to securely hold Gard Edge in place.

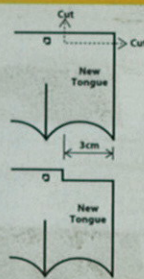

Tools required:

Spade, mallet, block of wood and fine cross-cut saw.

Cutting and Joining Gard Edge

If a section needs to be shortened, cut the Gard Edge to the required length using a fine saw. To create a new joining tongue, carefully cut the top of the edging as shown. This can now be fitted into the slot of the adjacent edging.

Gardman guarantees this product against any defect arising from faulty materials or workmanship for a period of 10 years from the date of purchase, providing that it has only been used in accordance with our instructions. This guarantee is limited to the repair or replacement of any defective or faulty item. This guarantee does not cover any additional costs such as labour for installation, other materials, expenses, or consequential loss. Proof of purchase must be retained.

This guarantee is in addition to and does not detract from your statutory rights as a consumer.

Patent Pending.
